

22 new features and improvements available with **TeamViewer 13**

iOS Screen Sharing

Experience the first and only iOS Screen Sharing remote support solution. For the first time ever, IT technicians can view remote iPhones and iPads in real time. Remote support to iOS devices is now much more efficient, meaning the end-user experience is improved since technicians can provide faster, more accurate troubleshooting.

Recent Connections

Quickly re-connect with the devices you interacted with most recently, without needing to search for them again. Use the Recent Connections group at the top of the Computers & Contacts list to initiate remote control, file transfer, or online meeting connections.

Intuitive File Transfer

Optimize your workflow and save time setting up and managing file transfer between devices. Gain clarity on which files are being transferred to which device, and monitor the progress. Access recent folders to quickly locate the needed files, queue multiple stacks of files for transfer, and view the progress of the transfer within an overhauled UI.

Instant Log-in

Enjoy a hassle-free experience when logging-in to your TeamViewer account to work with one or more of the thousands of devices that you manage. Log in instantly, even when your Computers & Contacts list contains thousands of contacts and devices, thanks to improvements that take advantage of secure caching.

Enhanced Remote Printing

Easily print remote documents locally with better quality than ever before. Save time and avoid misunderstandings by removing the need to create multiple versions of the same document in order to print. Enable remote printing with macOS, HP printers, and full color, as well as an overall improved user-experience.
