

# Live

Test your website across any device or browser that has ever existed. Yes, even IE6.

## THE WORLD'S MOST TRUSTED PLATFORM FOR CROSS-BROWSER TESTING

Interactively test your websites across a maximum market coverage of browsers and devices to ensure your code works everywhere without a glitch. Everything on Live works out of the box and requires zero setup or maintenance. Consistently catch bugs early in the development process, push code that works on every browser version, and deliver amazing experiences for every customer. Learn more about Live at: [browserstack.com/live](https://browserstack.com/live).

### Be Confident Your Website Works Everywhere

Identify and solve problems before they affect users. Test every possible user scenario across [1,200+ browser combinations](#) on a wide range of operating systems and real mobile devices. Live gives you the assurance of knowing your website looks and functions exactly as it should for every customer.

### Test on Real Devices, Without Spending a Fortune

While testing on physical devices is costly and high-maintenance, the alternative—emulators—gives inaccurate results. Our global network of data centers replaces your in-house device labs with the Real Device Cloud—a mobile infrastructure offering thousands of popular iOS and Android devices for testing on demand 24/7. With Live, rely on accurate results and a truly native experience, as good as testing with a device in hand.

### Test Early and Often on Your Environment

Costs of fixing defects and reworking requirements increase exponentially in later stages of the SDLC. Start testing early. Local Testing in Live enables you to instantly test both development and staging environments on the BrowserStack cloud without any setup or configuration, including servers behind firewalls, proxies and internal setups.

### Debug and Fix Instantly

Quickly find, reproduce and troubleshoot issues in your web apps and sites. Get to resolutions faster than ever. Browsers and devices come equipped with comprehensive [pre-installed developer tools](#), helping you identify the root cause of every client-side issue faster than ever. Use our native integrations to screenshot, annotate and file bugs across teams on Jira and Trello without switching tools.

### Get Uncompromising Security

Rest assured all your data is securely managed across all browsers, devices and operating systems during test sessions. Once a session ends, all the data is wiped out, ensuring the next session runs on a pristine browser. Read our [Security policies](#) to learn more.

“ BrowserStack enables us to test client websites on 10x more platforms, protecting us from the embarrassment of clients finding issues in their websites. ”
