

The integrated
team environment

Key Benefits

An all-in-one solution,
completely integrated out of the box.

Synergy across all areas, helping you eliminate duplications, distractions from extra notifications, and context-switching.

- **The team structure is fully integrated:** when you add teams to projects, all members of the team automatically gain access to all project resources.
- **Personal inbox: code review updates,** newly created issues, new blog posts, vacation requests – you get all of these in chats and you can react in-place or add them to your to-do list automatically.
- **Set availability statuses that are visible to everyone:** Space tracks members' availability, making sure that if someone is unavailable, colleagues are made aware of this before assigning them code reviews, booking meetings, and more.

A self-service approach: you can begin a new project in no time, without any assistance from your IT team.

Combines all the tools a software team needs to develop products: source code management, code review and browsing, continuous integration, delivery, and deployment, package repositories, issue tracking, planning tools, and project documentation.

Overview

JetBrains Space is an all-in-one solution designed to promote open communication and visibility across teams in an organization, with full support for the software development cycle and related processes.

It combines chats, teams, blogs, articles, meetings, version control, code review, CI/CD pipelines, automation, software packages, issues, planning, knowledge base, and more. This is a platform powerful enough for your technical excellence and innovation, yet friendly enough for all the people in your organization to use.

Everything in one place: meetings, roles, teams, projects, chats, company updates, workplace locations, and more.

First-class IDE integration: connect a JetBrains IDE to Space and check out your projects, see who is editing the same file, and mute notifications when you're debugging.

Space is completely customizable: the whole platform can be customized and extended to meet the unique needs of your organization.

Every bit of content is personalized: Space ensures a personalized experience throughout your blog feed, meeting schedule, projects, tasks, to-do lists, commits, code reviews, and automation updates.

Any workflow can be automated inside Space: from the steps for onboarding new employees or configuring rules for merging requests to CI/CD pipelines.

A cost-effective solution: Space is priced to offer the best value, especially when compared to the cost of using a combination of separate application stacks. This allows companies to optimize their expenses for development and collaboration tooling.

Key Features

- Chats
- Teams
- User and permissions management
- Calendars
- Meetings
- Absence Management
- Office Maps
- Blogs
- Version Control
- Code Review
- Package Registry
- Planning/Epic management
- Issue Tracker
- Personal To-Do List
- IDE integration
- Dashboards
- Automation (planned)
- CI/CD Pipelines (planned)
- Knowledge base (planned)
- Issue Boards (planned)

Extensibility

You can use HTTP API, Webhooks, and Client SDK for integration with external tools.

Flexible customization and in-product automation with custom fields and Kotlin workflows to fit specific processes and organizational structures.

Applications as the way to configure, reuse, and share extensions.

Apps

Space is available as a web application, a desktop client, and a mobile app for iOS and Android.

Versions

Space will be available in two editions: **Cloud** and **On-premises**. Both editions will be subscription-based and charged per user.

The Cloud version is available for free at the moment as part of an Early Access Program.

Request an invite to join the EAP: jetbrains.com/space

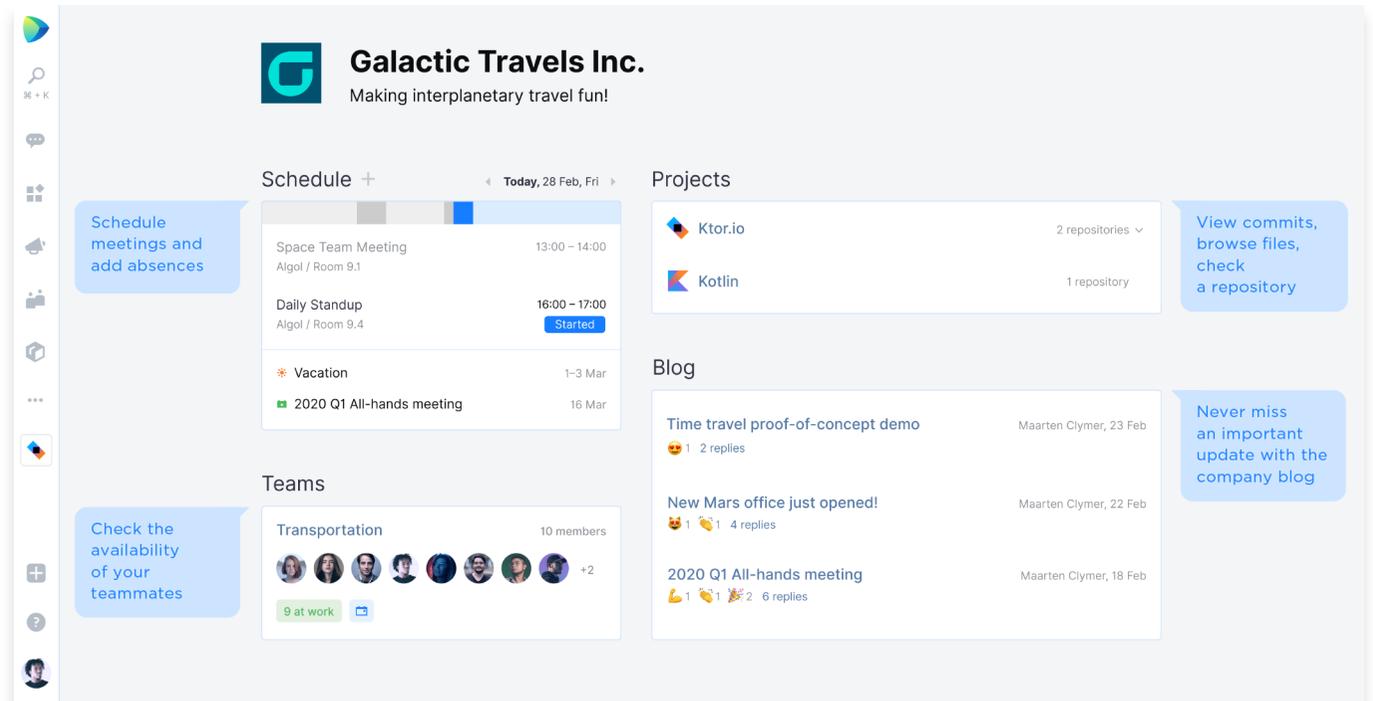

An **On-premises version** will be available after the release of Space 2020.

Pricing

Space Cloud starting plan is available under Freemium conditions. There is a charge for higher (premium) plans, which expand the functionality of the free version and provide additional resources. Paid plans start from \$8/ active user/month, and each plan is described according to its included resources (CI credits, Storage, Data transfer) and features. Additional resources, which expand the plan without requiring you to switch to a higher one, are also available for purchase.

The Space EAP is open for early access customers. Participants receive the Organization plan for free during the EAP: jetbrains.com/space/buy

The pricing model for Space **On-premises** is still in progress and will be announced later.
