YouTrack

Issue Tracker Designed for Development Teams

Key Benefits

Commands protect YouTrack from UI bloating, efficiently replacing zillions of buttons, dropdowns and checkboxes with a compact, flexible issue modification tool. Command syntax is similar to that of YouTrack search queries, so you can familiarize yourself with both very easily. The set of issue fields along with their values is completely customizable in YouTrack. You can de ne your own set of issue fields for every project: set your own States, add Severity, set Assignee field to be a multi-selection field, and much more. You can create custom work ows to de ne the lifecycle of your issues based on your specific needs and choose your system language. With powerful customization capabilities you have the power to create the issue tracking process according to your business needs.

Key Facts

JetBrains YouTrack is an intelligent, agile issue tracker and project management tool for development teams. It helps software developers perform most of their issue-handling tasks with two simple, keyboard-driven controls: a search box and a command window. In YouTrack search box, you enter Google-like search queries aided by suggestions and highlighting. This lets you filter our any set of issues in no time, concentrating on the task at hand. Powerful YouTrack commands help you modify multiple issues simultaneously. For example, you can mark 10 issues as being in progress, raise their priority, and specify a product version that they affect — instantly. Agile project management in YouTrack is designed to help teams plan, visualize and manage their work in an effcient manner, with support for both Scrum and Kanban methodologies.

Key Features

- Intelligent search via search queries with completion and highlighting.
