

The most flexible native mobile app testing solution

App testing for any framework, at any scale, on just about any device

Real Devices, Reliable Results

Give your laptop the instant ability to run live and automated tests on 200+ unique real mobile devices. All plans come with unlimited users so your entire team can test on the devices your customers use and deliver a higher-quality experience.

Seamlessly Automate Your Test Scripts

Support for any native mobile test-automation framework, including Docker-contained custom frameworks. Faster test runs with cloud-side execution. Integrates with your team's existing process and tools with native plug-ins and our REST API.

Flexibility Scaled, Security Ready

The right option for your team with the most deployment options. Includes public cloud, dedicated devices, private cloud, and on-premises. A customizable, scalable solution that quickly matches your testing, security, and hosting needs.

It was hard to scale our testing efforts before switching to BitBar. Now we run test automation on a hundred phones hosted by BitBar, and we have alerts on the phone status online. It's a much more robust environment where it's more self-healing and we've got more eyes on it.

– Joel Maher, Lead Automation & Tools at Mozilla

With BitBar, we have implemented an optimal DevOps process. The automation and scalability of BitBar allows us to execute more tests on more devices within the same amount of time. This gives us the confidence to move our SDK through all phases of our pipeline and deliver quality SDK to game developers rapidly.

– Rasmus Selsmark, QA Lead at Unity Ads

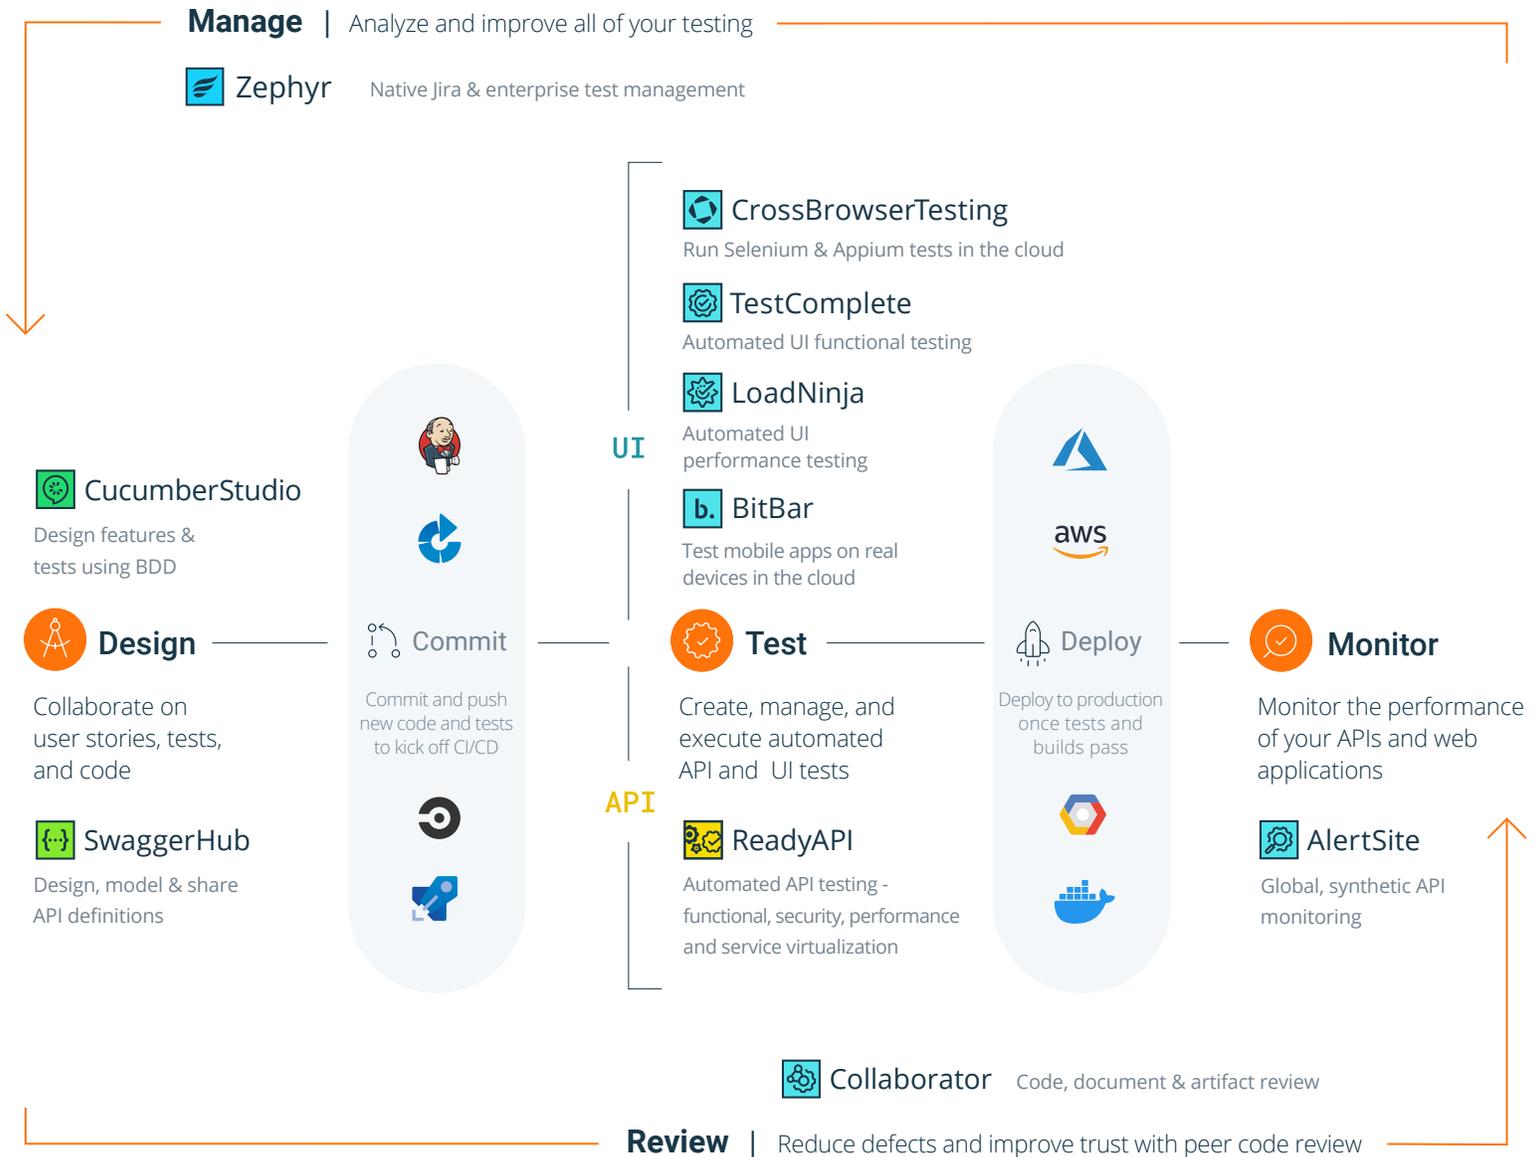

Customers of all sizes, markets, and verticals trust BitBar for their testing needs.
