SMARTBEAR
CrossBrowserTesting

The only all-in-one testing platform to run automated, visual, and manual tests on thousands of real desktop and mobile browsers
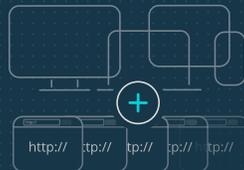

Make every web experience perfect, on any browser or mobile device

Seamlessly Automate Your Test Scripts

Easily run Selenium, Appium, and other test frameworks on our device cloud in parallel to radically reduce your testing time while simultaneously boosting your test coverage

More Options = Better Coverage, Real Devices = More Reliability

Your laptop just became every browser and device you could hope for with instant access to thousands of configurations and the latest devices for the ultimate testing experience

All-In-One Option for Live Testing Success

Accelerate your bug hunting by seeing more at a glance. Get Full-paged, windowed, or Chromeless screenshots and device logs, so you never have to worry about your application rendering differently

Trusted by thousands of testers to accelerate testing workflows

I can't imagine a world before CrossBrowserTesting because that would be a prehistoric way of doing user and acceptance. It would be incomplete; the browsers and devices would be a subset of what our users have.

– Vik Chaudhary, CEO at Onboardify

Integrations to fit into your already existing workflows

Software Development Lifecycle with SmartBear

Agile and DevOps have transformed the rate of software development. To keep up, teams must work and communicate in new ways – which is where SmartBear comes in. Our tools help streamline your process, so you can release software at the speed your customers expect.

Manage | Analyze and improve all of your testing

Zephyr   Native Jira & enterprise test management

CrossBrowserTesting
Run Selenium & Appium tests in the cloud

TestComplete
Automated UI functional testing

LoadNinja
Automated UI
performance testing

UI

BitBar
Test mobile apps on real
devices in the cloud

CucumberStudio
Design features &
tests using BDD

Design

Collaborate on
user stories, tests,
and code

Commit

Commit and push
new code and tests
to kick off CI/CD

Test

Create, manage, and
execute automated
API and UI tests

Deploy

Deploy to production
once tests and
builds pass

Monitor

Monitor the performance
of your APIs and web
applications

SwaggerHub

Design, model & share
API definitions

API

ReadyAPI
Automated API testing -
functional, security, performance
and service virtualization

AlertSite

Global, synthetic API
monitoring

Collaborator   Code, document & artifact review

Review | Reduce defects and improve trust with peer code review

SMARTBEAR

16M+ Users | **24K+** Companies | **194** Countries

Over 16 million software professionals and 24,000 companies across 194 countries use SmartBear tools.
