

# SMARTBEAR ReadyAPI

## Accelerating API quality through testing

Transform the the speed of your software & API development with Service Virtualization

## Transform the the speed of your software & API development with Service Virtualization

### Generate from a spec or record live transactions

Import a spec like OAS or record live API traffic from a REST or SOAP service to create a dynamic, "living" API. Enable continuous testing for agile development by eliminating dependencies

### Configure Network & Server-Side Performance

Develop & test around edge-cases, error-states, and difficult to replicate scenarios with ReadyAPI. Configure network latency and server capacity to limit the performance of your API so you can prepare for every real-world scenario

### Share Virtualized Services in Public or Private Cloud

Run and share your virtualized assets to the team on distributed infrastructure using VirtServer. Track and manage your asset usage with a simple web interface

## Eliminate dependencies and start accelerating releases

 ReadyAPI allows us to overcome the dependency of our core application on other internal and external services. This is key when the core application is ready for testing, but the services around the application are not.

- Gari Gono, Solutions Architect at Zurich Insurance

### Integrations

Jenkins

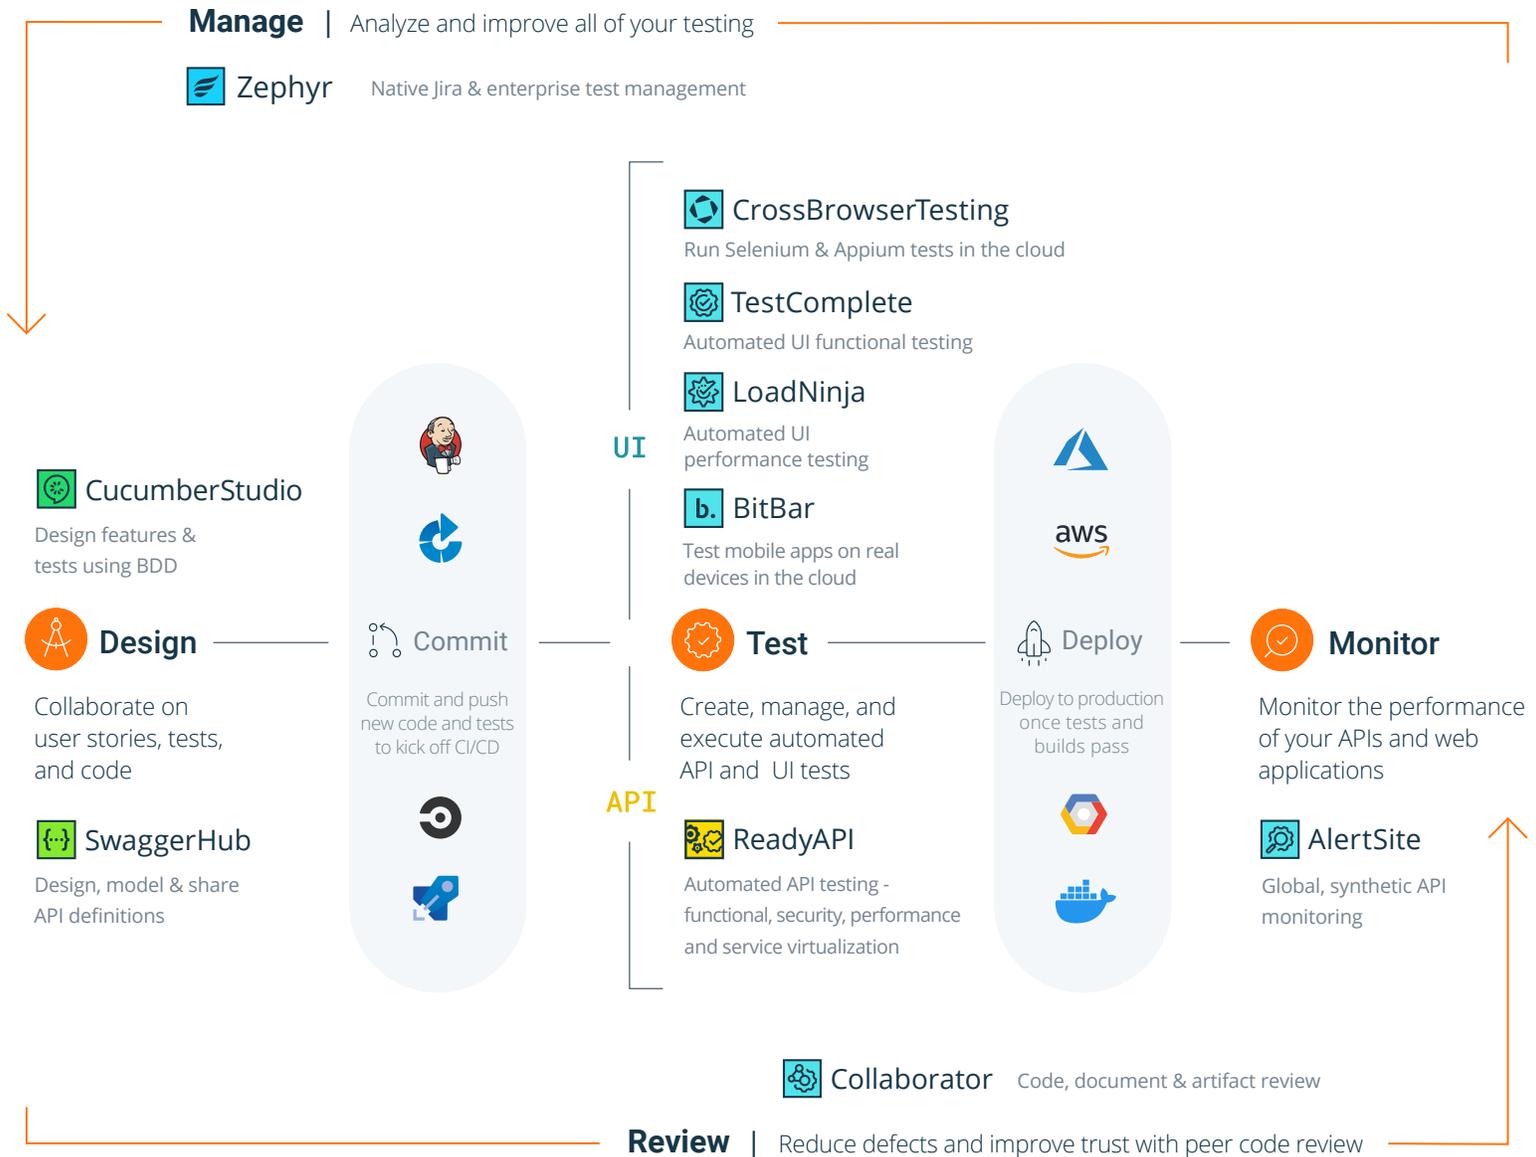

### Innovators Who Trust ReadyAPI

# Software Development Lifecycle with SmartBear

Agile and DevOps have transformed the rate of software development. To keep up, teams must work and communicate in new ways – which is where SmartBear comes in. Our tools help streamline your process, so you can release software at the speed your customers expect.

16M+ Users

24K+ Companies

194 Countries

Over 16 million software professionals and 24,000 companies across 194 countries use SmartBear tools. To view all of our products visit [smartbear.com/products](https://smartbear.com/products)
