

Team Corporate License

Designed for Teams with Multiple Users
Where Multitasking Is a Must

- ✓ Multiple Seats
- ✓ 3 Sessions
- ✓ Unlimited Endpoints

Team Corporate License Feature Highlights

- ✓ **Multiple seats**, so each user on your team gets a licensed TeamViewer account.
- ✓ **3 sessions** (aka channels), so at any given time, 3 of your licensed users can each use their own channel to open remote sessions from their computers or mobile devices. Each person can then connect to up to 15 devices, in separate tabs, for productive multitasking.
- ✓ **Unlimited endpoints**, so you can remotely access, support, and control as many attended devices as needed. Attended devices, such as desktop computers, laptops, phones*, or tablets* must have the TeamViewer QuickSupport app installed on them and require another person to accept an incoming remote connection request in order to start a session.
- ✓ **500 managed devices**, so you can remotely access, support, and control unattended devices, such as servers, point of sale (POS) systems, digital signage, or kiosks. Unattended devices must have the TeamViewer Host app installed on them and do not require another person to accept an incoming remote connection request in order to start a session.
- ✓ **Reporting**, so you can monitor incoming connections to each device and automatically log every outgoing connection made by licensed users for compliance, billing, auditing, and productivity purposes.
- ✓ **Mass deployment**, so you can silently and instantly install the TeamViewer Host app on hundreds (or even thousands) of devices, for easy unattended access across your network.

**Remote Connections to mobile devices from computers require the Mobile Device Support AddOn.*

How it works

When accessing or providing remote support for devices, there's no charge to you or your support recipients to establish incoming remote connections. That means you can use your TeamViewer licensed user accounts to remotely access and support an unlimited number of endpoints (computers, servers, or mobile devices*).

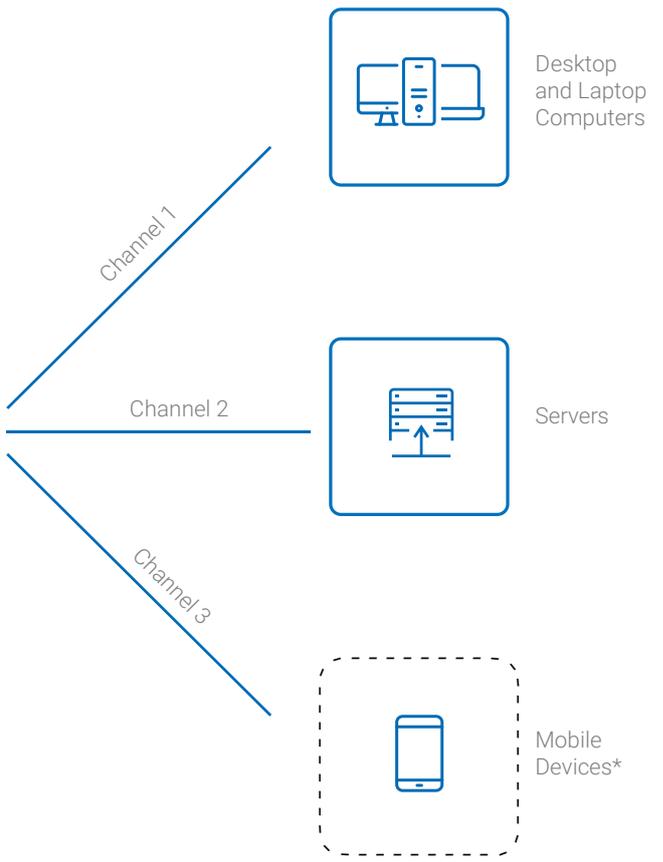

The Corporate plan comes with 3 channels, enabling 3 different licensed account users to open their own remote session and connect to up to 15 devices – all at the same time.

With multiple seats, each team member gets their own licensed TeamViewer user account.

Each channel lets you connect to up to 15 devices at a time in one session

If your team need to use more than 3 channels at the same time, extra AddOn channels are available.

**Remote Connections to mobile devices from computers require the Mobile Device Support AddOn.*

TeamViewer Security

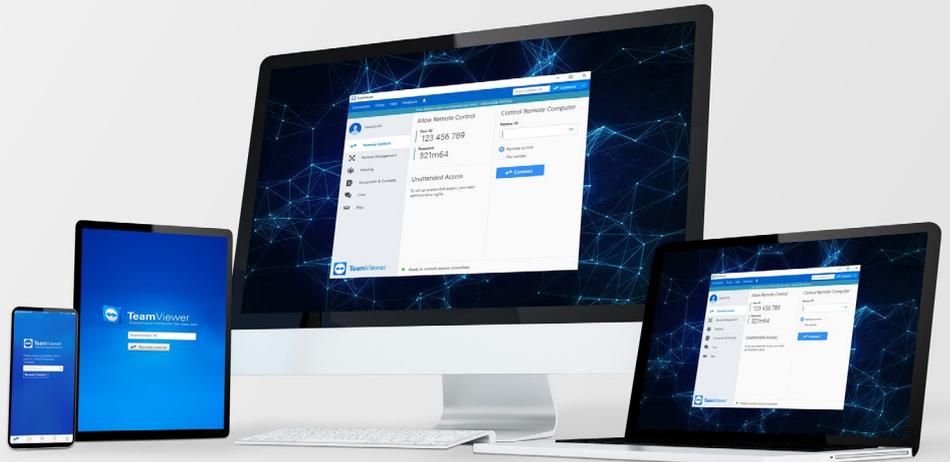

Your Security Is Our Top Priority

All remote sessions are secured by end-to-end encryption. Learn more about security at our [Trust Center](#).
